New Lubrication Company Product Offers Increased Performance and Safety to Gun Owners

(Portland, OR) April, 2008 –FOR IMMEDIATE RELEASE: **LubriSilk™** Gun Oil, distributed worldwide by **Green Lubrication Solutions™** (GLS), offers superior results in heat reduction, increased velocity, minimal maintenance and surface protection. The LubriSilk Gun Oil acts as a cleaning solution, lubricant, EP (Extreme Pressure) agent and an anti-corrosive agent, so **no other products are required—not even a grease.**

Company officials expect that gun enthusiasts nationwide will quickly adopt this product line. “It’s a no-brainer; they save money on maintenance while increasing performance and safety,” said Randy Hufford, GLS President. “We are very excited to be representing this product; we feel it’s just a matter a time before practically every law enforcement officer, sport gun owner, and hunter in America will make this a standard part of their equipment maintenance, because of the remarkable benefits.”

The same technology that makes LubriSilk Gun Oil effective is so powerful, it also works for engines. In fact, most of the products offered by Green Lubrication Solutions are designed to treat engines. Patented lubrication technology invented by the U.S. Department of Energy significantly increases energy efficiency, reduces emissions, saves gas and lubrication oil use. More importantly, the products are fully biodegradable, non-toxic and anti-corrosive. The newly formed Green Lubrication Solutions is joining the nation’s growing number of companies offering products or services formulated for minimal impact on the environment. Officially formed in December 2007, the company distributes a unique line of lubrication and engine enhancement products (**MotorSilk™** and **LubriSilk™**) that provide significant cost savings.

A comprehensive Press Kit is available, which details the product line offered by GLS, the technology behind them, expert testimonials, a full explanation of how they work, and corresponding environmental benefits. Interviews with Randy Hufford and/or MotorSilk users are also available.
